

Polls to Enter into Zoom for Virtual COVID-19 PD Meeting:

Large Group Activity:

1. How to account for risk characteristics within essential worker occupations:

Some occupations include people with more risk factors than others. Should those occupations be prioritized overall? OR should DOHMH prioritize individuals at highest risk within a job category, without changing the priority of the occupation overall?

- The Health Department should advance the priority of the occupation overall.
- The Health Department should elevate the priority of individuals at risk within the occupation, without changing the priority of the occupation overall.

Final Recommendation Activities

2. Large Group Activity: Risk characteristic prioritization for essential workers

Which two risk characteristics do you think are most important to consider when prioritizing vaccine receipt for essential worker occupations? (Please select two answers from the list below.)

- Age
- Having a health condition that will increase risk
- Living in a neighborhood with limited resources (for example, crowded or with poor access to transportation)
- Race or ethnicity

3. Large Group Activity: Ranking essential worker occupations

Please select the 3 essential worker occupations you think should be prioritized to receive the COVID-19 vaccine:

- Bus driver
- Child protective services worker
- Construction worker
- Elementary school teacher
- Grocery store worker
- Sanitation worker

4. Large Group Activity: Risk characteristic prioritization for the general population

Which two risk characteristics do you think are most important to consider when prioritizing vaccine receipt for the general population of NYC? (Please select two answers from the list below.)

- Age
- Having a health condition that will increase risk
- Living in a neighborhood with limited resources (for example, crowded or with poor access to transportation)
- Race or ethnicity
